

XCODE build notes

Phases 1 to 3: sign in and access, setup, revenue

UI file	Version	Use
XCODE Web.html	0.9	Responsive web app. All web screens in one file
XCODE Mobile.html	0.9	Mobile app reference for the cross platform build

Build every screen as it appears in the files. Data in the files is demo data for review only.

Build order

Phase	Modules
1	Sign in, unlock, app shell, people and access
2	PSV companies, vehicles, recurring costs and savings, change log
3	Revenue
Next	Connect dashboard cards to live data

Phase 1: Sign in, people and permissions

Module	Screens	Web	Mobile
Sign in	Sign in, email code, choose PIN, sign in paused, reset PIN	Yes	Yes
Unlock	PIN pad for a trusted phone		Yes
App shell	Top bar, left menu, bottom menu, your access	Yes	Yes
People and access	People list, add or edit person	Yes	

Rules

- Sign in is mobile number and a 4 digit PIN. Email is used only to send codes.
- An email code is needed for a new device, a first PIN and a PIN reset. 6 digits, valid for 10 minutes.
- Five wrong PINs pause sign in for 15 minutes. A PIN reset by email lifts the pause.
- A PIN cannot be four identical digits or a run such as 1234.
- Access is a role, plus permissions added or removed for the person, plus what they can see, plus an approval limit.
- Ticking a permission also ticks the permissions it needs.
- Nobody can change their own access. People can only manage others whose access sits inside their own.
- Menus, cards and actions show only what the person is permitted to use. The server checks every action.
- Removing access blocks sign in and keeps the person's records.
- Every change to access is written to the change log.
- Screens use buttons with direct handlers, never HTML form submission.

Phase 2: Setup

Module	Screens
PSV companies	List, add, rename
Vehicles	List, add or edit vehicle, vehicle report
Recurring costs and savings	List, add or edit item
Change log	List

Rules

- Registration numbers use the format KDA 482M and are unique. A registration cannot be edited after the vehicle is added.
- The weekly target is dated. A change applies from today.
- A recurring item runs daily, weekly on a chosen day, or monthly on a chosen date or the last day of the month, between its start date and optional end date.
- A recurring item's split across vehicles must equal its total before it can be saved.
- Items post automatically on their due dates and show in each vehicle's report.
- Savings are shown separately from costs.
- Editing an item that has already posted starts a new version from today. Items are stopped, never deleted.
- Setup lists show only the vehicles in the person's own view.

Phase 3: Revenue

Module	Screens	Web	Mobile
Revenue	Week grid, vehicle week detail, capture dialog	Yes	
Revenue	Day list, week list, capture sheet		Yes

Rules

- Each vehicle has one record per day: an amount, or a reason.
- Reasons are Garage, Arrest, No Crew and Other. Other needs a short description.
- A missing day must be filled before a later day for that vehicle. The screen opens the earliest missing day first.
- After saving, the screen moves to the next vehicle still missing a record.
- Expected revenue per day is the weekly target that applied on that day, divided by 7.
- Days in the future, days before a vehicle joined the fleet, and today before capture are not counted as a shortfall.
- Changing a past day needs the "Correct revenue after the day" permission and is recorded as an edit.
- The mobile app captures offline and syncs when a connection returns. No entry is ever lost.

Demo logins in the UI files

Person	Mobile	PIN
Owner	0733 520 614	4826
Revenue clerk	0712 345 678	2580
Office admin	0722 410 355	1379, then an email code
Fleet manager	0700 111 222	Sets a PIN with an email code

Screens: XCODE Web
